Auto Ticketing (CA-AT)

Description COMMANDaggregate's Auto Ticketing (CA-AT) module provides the ability to ticket an order without user intervention through the use of an electronic transmission device used by incoming trucks.

- Features**
- When a truck pulls into the yard, a device automatically reads the truck number. If the truck has been assigned to an order, the traffic light changes from red to green. If the truck has not been assigned, the light changes to yellow to signal the driver to check with the weighmaster.
 - When the truck pulls onto the scale after loading, the weight is electronically read and the ticket for the truck and order is printed automatically.
 - The weight is automatically stored, thus saving time.
 - Prevents human error in the ticketing process.
 - Controls stoplights automatically while the truck is on the scale.
 - Speeds up flow of trucks through the loading and ticketing process.
 - Allows unattended ticketing operation of a loading station.
 - Interfaces to unattended ticket printer.
-

- Prerequisite Modules**
- **Truck Scale Interface (CA-TS)**
 - **Order Entry and Ticketing (CA-OE)**
 - **Rostering (CA-RO)**
-
