

# COMMANDseries COMMANDaggregate COMMANDnetwork (CA-NW)

---

**Description**      COMMANDaggregate's COMMANDnetwork (CA-NW) module is the program running behind the scenes which connects multiple COMMANDseries users in a network system. COMMANDnetwork also allows COMMANDseries modules to work together as a package.

---

- Features**
- Provides communication between each COMMANDseries workstation across the network.
  - Allows activities occurring on a network level to be transmitted to other computers on the network. This module allows the computers to communicate. For example, if a truck is moved on a truck tracking screen, the movement is reflected at each PC linked to the network via the COMMANDnetwork module.
  - Provides network diagnostic logs to aid in network troubleshooting.
  - Supports replication of data between database sites.
  - Supports network ticketing . Allows users on the network to generate tickets to remote locations.
- 

**Note**                      **A COMMANDnetwork (CA-NW) license is required on each PC or server running any COMMANDaggregate module.**
