

COMMANDseries COMMANDaggregate Rostering (CA-RO)

Description

COMMANDaggregate's Rostering (CA-RO) module allows for the assigning of a specific truck to an order or load within an order for the current day and future dates. Offers two forms of rostering: truck rostering and order rostering. Truck rostering is accomplished through the Truck Roster Editor. Each truck is assigned orders and/or products and a number of loads. Truck rostering does not include a screen display. Ticket typing retrieves the truck roster and loads it into the ticketing screen. Trucks can be rostered without a schedule. Order rostering is derived from the order and schedule. Order rostering allows for the assigning of trucks to scheduled loads. Order rostering can be accomplished through order entry or an Order Roster Editor. Order Rostering includes a screen which displays trucks and assigned orders. No product is displayed.

Features

- Speeds up the dispatch and ticketing process by pairing trucks to orders and products.
 - Allows rostering of trucks through order entry or through the rostering screen all at the same time.
 - Allows trucks to be assigned to an order or load the day before.
 - Displays a warning message in Order Rostering if a truck is not assigned to the right hauler.
 - Provides a truck roster screen that shows all trucks and the loads to which they are assigned for a specific period of the day.
-

Prerequisite Modules

- **Order Entry and Ticketing (CA-OE)**
 - **Either Dynamic Scheduling (CA-DS), Order Monitoring (CA-MO), or Scheduling Reports (CA-SH)**
-
