

COMMANDinvoicing

With **COMMANDinvoicing** all information created by **COMMANDconcrete** or your **Command Alkon** batching system can be quickly edited and invoiced.

Invoice format and content are user-defined so that you can bill your customers anyway they would like to be billed. Flexible invoicing dates and terms allow you to customize the timing of your invoices with each customer's payment process.

Once printed, invoice information is immediately available in your **COMMANDreceivables** module or can be transferred to another accounting system for online updating of accounts receivable information.

Daily invoice reports can be configured and saved to your specified parameters. This allows you to input only dates each time you run your daily reports instead of having to enter the same report parameters day after day. Exception reporting, order suspension, and a simple copy functionality for creation of Credit and Debit memos is also available. Yearly price changes are handled easily.

These are just a few of the many time-saving features that **COMMANDinvoicing** offers.

"The Invoicing Module is being used at three locations and is very user-friendly for editing orders and printing invoices."
