

COMMANDinventory

The **COMMANDinventory** module is an inventory control system that provides accurate and up-to-date records for inventory transactions and accurate inventory quantities at the time of order entry.

COMMANDinventory features material receipt entry, usage entry, adjustments, material transfers, transaction registers, purchase order tracking, and inventory reporting. General Ledger entries can be tracked, if desired.

COMMANDinventory tracks only those items you desire to be under inventory control including those that are used as constituents for another item or sold outright. The system automatically creates usage transactions through the ticketing function in Order Entry and Ticketing and allows for manual entry of basic inventory transactions including receipts, usages, transfers, conversions, and adjustments.

An Inquiry Screen quickly identifies inventory quantities at various locations. Forecasted needs and historical material usages can be reviewed. Plants can be assigned to an inventory location, allowing multiple plants to utilize a single inventory location. A Material Transfer feature easily moves inventory items from one location to another with the appropriate transactions being created automatically.

"The inventory module helps me because I can check to see if a plant has received the inventory before I okay a bill for payment as opposed to calling the manager if I don't have a paper receipt in hand."

Gina Willis
Evans Concrete, LLC

Item Code	2	Type I/II Cement (US)	Location Code	1	Birmingham	Quantities in Tons				
Beginning Quantity	85.00	Received Quantity	500.00	Used Quantity	18.15	Other Quantities	150.00	Ending Quantity	416.85	Materials Forecast

COMMANDinventory allows for cost adjustments, the tracking of lot and serial numbers, rapid entry of Raw Material Receipts and Purchase Order Receipts and easy entry of beginning inventory quantity balances and costs. Basic purchase order tracking including purchase order entry, reporting, and updating of purchase order quantities after receiving are also allowed.

Built-in reports track inventory transactions and balances including quantities and costs of your inventoried items. General Ledger capabilities include the creation of General Ledger (G/L) entries for inventory transactions if desired, a detail and summary G/L Distribution report, and interfacing of G/L entries to external financial systems.

Benefits of COMMANDinventory

- ◆ Ensures accurate inventory information is available for dispatch
- ◆ Automatically creates receipts and usages
- ◆ Purchase order tracking
- ◆ Historical and forecast reporting
- ◆ Flexibility in costing methods
- ◆ Choose the level of detailed information you want to maintain

Prerequisites

- ◆ Recommended for use with Order Entry and Ticketing (CC-OE).
- ◆ Can be used as a stand-alone application, if desired.
