

DATA RECORDING

Part Number:

DESCRIPTION:

The Data Recording feature allows users to record data from IO registers. When the batching system is connected to a PLC, information such as plant power usage, water temperature, or air pressure can be recorded. Users can choose which registers they want to monitor.

Data Recording is installed with COMMANDbatch but runs as a separate .NET application.

OPERATION:

- Each time the value of a register changes, the data is captured and recorded in a local database on the COMMANDbatch PC.
- The Plant Watcher application retrieves data pertaining to mixer power, total plant power, and total water and distributes it to recipients via email.

SYSTEM REQUIREMENTS:

- COMMANDbatch V1.7.5.0 or later must be installed.
- Plant Watcher (latest version) must be installed.

IMPLEMENTATION:

- Monitored devices must be controlled by either a PLC or the E-Z Cal Manual Station.
- Configuration of the COMMANDbatch and Plant Watcher applications for Data Recording is, by necessity, a customization. Contact Command Alkon Sales for an estimate on the one-time cost for configuration.
