

MULTI COMPANY SETUP

Part Number: 25652

DESCRIPTION:

In a multi-company setup, COMMANDbatch is connected to one or more dispatch systems via the Universal Link (Ulink) protocol. A typical setup includes two companies with one company designated the "master company". Both companies batch from the same physical plant and use the same materials even though they maintain separate customers and mix designs.

OPERATION:

Material usage for each company is tracked separately and material alias names are used on batch weight reports and in material record export data.

Each company may assign its own ticket, load, order, and project numbers so that company data can be billed separately.

SYSTEM REQUIREMENTS:

- COMMANDbatch V1.06 or later must be installed.

(See the "Multi-Company Setup Guide" for additional setup procedures.)

IMPLEMENTATION:

- Create two companies and designate one company as the "master company".
- Create a separate Ulink interface parameter for each company.

(See the "Multi-Company Setup Guide" for additional setup procedures.)
