

REMOTE BATCH with Driver Authorization Box

Part Number: 24772

DESCRIPTION:

This option allows a driver to press an AUTHORIZE button at the remote plant to verify that the truck is in place and that plant equipment is ready and that no unauthorized personnel are around the equipment. This setup is particularly useful when the operator is out of sight or earshot of the plant.

OPERATION:

The driver presses the AUTHORIZE button at the remote plant to verify that the truck is in place and that plant equipment is ready and that no unauthorized personnel are around the equipment.

The driver can also press the HOLD button to stop all batching functions if he sees a problem.

If the SMS (Soft Manual Station) feature is used, the operator can manually feed material without being physically located next to the "real" manual station at the remote plant. (See the SMS product description for more information.)

CAUTION! Failure to follow safety procedures (see the "Remote Batching / SMS Setup Guide") can result in any or all of the following: injury to persons in the vicinity of plant equipment, improperly blended mixes, damage to plant equipment or facilities.

SYSTEM REQUIREMENTS:

- COMMANDbatch must be installed on the main batching PC.

IMPLEMENTATION:

- Configure COMMANDbatch for Remote Batching. (See the "Remote Batching / SMS Setup Guide" for detailed instructions.)
- Install the Driver Authorization Box in the remote plant.
