

## REMOTE BATCH - Software Only

Part Number: 22718

### DESCRIPTION:

This feature provides the software needed for an operator with line of sight to the batch plant to create and run batches on a remote batching PC. (**Note:** If the plant is out of the operator's line of sight, Driver Authorization Box – PN 24772 is required.)

### OPERATION:

Sitting at a location with line of sight to the batch plant, the operator creates and runs batches. The operator is restricted from performing other data entry tasks such as editing materials.

If the SMS (Soft Manual Station) feature is used, a remote operator can manually feed material without being physically located next to the “real” manual station at the remote plant. (See the SMS product description.)

**CAUTION!** Failure to follow safety procedures (see the “Remote Batching / SMS Setup Guide”) can result in any or all of the following: injury to persons in the vicinity of plant equipment, improperly blended mixes, damage to plant equipment or facilities.

#### ***Driver Authorization Box Option***

If this option is purchased, the driver must press the AUTHORIZE button at the remote plant to verify that plant equipment is ready and that no unauthorized personnel are around the equipment. (See the Driver Authorization Box – P/N 24772 product description.)

### SYSTEM REQUIREMENTS:

- COMMANDbatch must be installed as a host on the main batching PC.
- COMMANDbatch must be installed as a client on the remote PC.

### IMPLEMENTATION:

- Configure COMMANDbatch for Remote Batching.
- Establish a network connection between the host plant and the remote PC.

(See the “Remote Batching / SMS Setup Guide” for detailed instructions.)
