

## **SBS (SIMPLIFIED BATCH SETUP) KEYBOARD SCREEN**

**Part Number:**

### **DESCRIPTION:**

The SBS Keyboard Screen was designed for users who would rather use the keyboard for making pre-batch adjustments and running batches. It combines the Eagle's Verify, Batch Setup, and Batching screens into one display. The mouse can be used, but the SBS Keyboard Screen was designed with keyboard use in mind.

Only batches for the current day are displayed and the batch operator can only run batches for the plant assigned to his or her user login.

### **OPERATION:**

A Data Entry area is provided on the left side of the SBS Keyboard Screen so that batching information such as slump, water trim, and design amounts can be edited for the selected batch.

When a batch is started, a Batch Graph on the right side of the screen displays a progress bar and target information for each device used for the batch.

Once discharge is complete, the batch disappears from the screen.

### **Notes:**

- A special xml file can be used to customize the layout of the SBS Keyboard Screen. See the "SBS XML File Configuration" document for more information.
- A "touchscreen" version of SBS is also available. See the "Touchscreen Simplified Batching" manual for more information.

### **SYSTEM REQUIREMENTS:**

- COMMANDbatch V1.05 or later must be installed.

### **IMPLEMENTATION:**

- Install the SBS Keyboard application on the same PC as COMMANDbatch.
- The monitor used for the SBS Keyboard Screen must be set to 1280 x 1024 resolution.
- The SBS Keyboard Screen was designed to run on a separate monitor; however it can be run on the same monitor as COMMANDbatch. If a separate monitor is used, it can be purchased from Command Alkon.
