

COMMANDconcrete 2-way Batch Interface with Command Alkon Batching Controls (CC-CAI2B)

Description

COMMANDconcrete's 2-Way Batch Interface module (CC-CAI2B) provides a computer link between COMMANDconcrete and Eagle, Spectrum, or COMMANDbatch batching controls. The link sends tickets and/or batching information directly to the batch computer. The batch computer can then print a delivery ticket with actual batch weights. This interface works in conjunction with the Order Entry and Ticketing module. The features below are supported by this interface. Additional features may be supported, based on which Command Alkon batch control system you are using.

Features

- Offers direct computer-to-computer communication, eliminating human errors on batch mix, load size, or truck assignment.
- Produces accurate delivery tickets with accumulated total quantities shipped, even if multiple plants share in delivery.
- Prints delivery tickets at the dispatching or batching site.
- "Stacks" the loads on the batch computer.
- Transmits extra products to the batch computer even if they are not included in the mix, so that these products can be delivered (priced if COD).
- Allows the batch weights for each plant to be controlled by a central computer. Weights can be transmitted to the desired plant when a new mix is added or changed or when the batch computer experiences problems.
- Returns batch weights from the batch computer to COMMANDseries, allowing for centralized reporting.

Prerequisites

- COMMANDconcrete Order Entry and Ticketing (CC-OE)

Notes

- None
