

## COMMANDconcrete Third Party 2-way Batch Interface (CC-SB2)

---

**Description**      COMMANDconcrete's Third Party 2-Way Batch Interface module (CC-SB2) provides a computer link between dispatching and batching. The link sends tickets and/or batching information directly to the batch computer. The batch computer can then print a delivery ticket with actual batch weights. This interface works in conjunction with the Order Entry and Ticketing module. Although COMMANDconcrete's Third Party Batch Interface supports all of the features listed below, the actual features supported when using a third party batch computer depend on the batch computer. Contact your third party vendor to determine what features are supported and if additional hardware or software is required.

---

**Features**

- Direct computer-to-computer communication eliminates human errors on batch mix, load size, or truck assignment.
- Produces accurate delivery tickets with correct accumulated total quantities shipped, regardless of which plants share in delivery.
- Prints delivery tickets at the dispatching or batching site.
- "Stacks" the loads on the batch PC for loading.
- Transmits extra products to the batch computer even if they are not included in the mix, so these products can be delivered (priced if COD).
- Allows the batch weights for each plant to be controlled by a central computer. Weights can be transmitted to the desired plant when a new mix is added or changed or when the batch computer experiences problems.
- Returns batch weights from the batch computer to COMMANDseries, allowing for centralized reporting.

---

**Prerequisites**      - Order Entry and Ticketing (CC-OE)

---

**Notes**                - None
