

COMMANDqc Third Party Integration Module (CMDQC-3rdIM)

Description

The Third Party Integration Module provides a real-time interface to synchronize data between COMMANDqc and third-party management or ERP systems.

Features

- Updates COMMANDqc automatically with changes made to Customers, Projects, Raw Materials (including costs), and other master files on the third-party system
 - Updates COMMANDqc automatically with ticket, batch weight, and other transactional information from the third-party system
 - Batch weight integration provides real-time production monitoring
 - Updates the third-party system with Product and Mix Design changes made on COMMANDqc
 - Ensures delivery ticket information is available when test samples are entered
 - Provides robust error-checking and reporting of data mismatches in the transferred data and an audit log of all data transfers
 - In the event of a network outage, pending data transfers are automatically executed when the system comes back on-line
-

Prerequisites

- COMMANDqc Base Module (CMDQC-CBP)
 - Third-party system must support MS SQL Server data transfer.
-

Notes

- Custom software development may be required on the third-party system to make use of this module.
