

COMMANDqc Batch Plant Control & Production Analysis (CMDQC-PA)

Description

Comprehensive analysis & reporting tools to help identify batching exceptions, trends and to report material usage.

Features

Assessment of Plant Batching Variations from Target

- Compare target weights to actual weights in easy to understand graphs, by plant or by product code
- Drill down into problem areas.
- Identify exceptions and loads that do not meet your specifications. Report on plant, ticket number, product, customer, time of day, load size and material or materials causing any on-site issues.
- Individual or cumulative exception graphing makes it easy to zoom in then instantly click on a graph point to retrieve details of any delivery ticket in the system.
- Individual or cumulative exception graphing enables the operator to perform a batching trend analysis. Compare material over or under batching and its effect to stock control and production costs.
- Every batch record is searchable by ticket number.
- Actual and target costs, combined aggregate gradings, and yield are calculated for every load.
- Option to produce reports over a date range, then filtered by fields such as Customer, Project, Plant, mix or mixes etc.

Production Analysis

- Create Production and Material Usage Reports by Customer, Plant, Date, Truck, Ticket, Product Code, or Time over any date range or ticket number range.
 - Reports can be Target, as Batched Actual, or SSD corrected.
 - Reports can be further sorted by Product Code, Truck, Customer or Plant
 - Example: Volume produced for a specific customer at a specific plant for a specific time period.
-

Prerequisites

- COMMANDqc Base Module (CMDQC-BCP)
 - COMMANDqc Concrete QC & Lab (CMDQC-CQCL)
 - COMMANDqc Third Party Integration (CMDQC-3rdIM)
-

Notes

- None
