COMMANDaggregate

COMMANDexecutive Database (CA-EX)

Description COMMANDaggregate's COMMANDexecutive Database (CA-EX) module is a management reporting module which posts all order and ticket information into a data warehouse and creates sales and gross margin reports from the data.

- Feature**
- Posts ticket/product information from COMMANDconcrete or COMMANDaggregate into a detail table as well as summarized tables based on user defined selections.
 - Allows user defined summarized data with up to five different summary levels.
 - Allows compression of summarized data to a user defined period of dates.
 - Allows additional summarized groupings to be added at any time.
 - Maintains three tables:
 - Ticket/Product Detail—all pertinent information related to every product or charge on each ticket, along with the necessary order information. All sales and profit reports that require ticket detail will use this table. This table allows the daily order and ticket tables to be purged regularly and allows for building new summary sales records.
 - Summary Sales and Profit—based on user defined combination for desired reporting. For example, "Customer/Plant/Product" or "Plant/Product Category." One record will be created for each date on which activity occurred. The records can be compressed into monthly summaries. All sales and profit reports will use this table.
 - Summary Time Analysis—summary records for Customer, Customer/Project, Truck, Driver and Plant will be created for each date on which activity occurred. The records can be compressed into monthly summaries. Accumulated time analysis reports will use this table.
 - Offers a user defined summary combination that indicates how reports are to be produced.
 - Offers compression routine to combine dates in the summary sales and profit table into a single monthly record.
 - Allows all tables to be updated manually for a single date or a date range.
-

Prerequisite Module ➤ **Order Entry and Ticketing (CA-OE)**
